## Diagramming and AI as a research tool

We discussed AI and all put the same reading into Chat GPT to see how the results differed.

They were all different depending on if we had used it before, how we had used it before, almost tailored to the individual.

This struck me as homogenistic, and as algorithms remove choice by 'helping' stream your content, if AI does this too, then how are you getting wide and varied opinion that open your mind and challenge you, rather than tell you everything you already know?

We used diagramming to explore the reading and I found this really useful in trying to make sense of and getting to grips with the wider and deeper overall themes.

This is definitely something I would like to take into my practice, when I have time, to fully interrogate readings.

AI seemed to be a useful research tool and definitely helped me look at things in a different way, but I would avoid using it to 'write' for me, as when we all start to that, what is left?
